SCIENCE AND PROGRESS IN BRICS

SCIENCE AND PROGRESS IN BRICS

INTRODUCTION:

In this modern world, science plays a very important role. It is the base for the future world. Throughout the history of mankind, science is getting us to the next level with its beautiful and amazing inventions and discoveries. Science is in and around us, in every field, in every action, in every ways. Several new breakthroughs are coming out every day and they make our lives so easy and comfortable. Among that breakthroughs BRICS members are noteworthy. Recent advancements are going on several fields of science.

SCIENCE AND TECHNOLOGY:

BRICS Countries are now pioneers in space research and exploration. Out of four countries that succeeded in Mars Mission, INDIA and RUSSIA are also included. India is doing great with successful commercial space vehicle launches, while china launched its Gaofen -3 high resolution radar imaging satellite .Russia have already engaged in building space station along with other developed nations. Other BRICS members are also initiated their future dream programs.

MEDICINE:

BRICS members accounts for more than 40% of the world's population. So there is even a tougher challenge for them to tackle the health hazards and emerging diseases. Even with the huge burden on their shoulders, they are progressing slow and staidly in the field of medicine .Several programs and interventions are being implemented and going successfully to defeat the sick burden in the countries. Intensive researches are going on in several medical fields.

OTHER FIELDS:

Science is also making great progress in every other fields with new inventions and innovations.

CONCLUSION:

Technological advancements are the most important component in any countries economy. With recent technological developments and ongoing researches, BRICS members are already at their way to reach world's largest economy. With the New Development Bank (NDB) established by BRICS members, the bank shall support public and private projects, there is even a greater future in the field of science.
