

# MEASI INSTITUTE OF MANAGEMENT

**NAME : MOHAMMED IBRAHIM RAAQHIB**

**COURSE : MBA – B Sec.**

**TOPIC : SCIENCE AND PROGRESS**

As we all know that we live in the age of science and technology. The life of every one of us depends on the scientific inventions and modern day technologies. Science and technology has changed the lives of people to a great extent. It has made life easy, simple and fast. In the new era, the science development has become a necessity to finish the era of bullock cart and bring the trend of motorized vehicles. Science and technologies have been implemented to the every aspect of modernization in every nation. Modern gadgets have been introduced which changed the life of a and have solved almost all the problems. It was not possible to have all the benefits of it without implementing it in the sectors like medicines, education, infrastructure, electricity, aviation, information technology and other field.

Advancement in the science and technology in many areas has made the lives of people more advance than the ancient time. Advancement in the science and technology is directly and positively affecting the people's way of living on one hand however it is also affecting indirectly and negatively on the people's health on the other hand. New inventions in the field of science and technology are very necessary in such a modern world for a country to be strong and well

developed country than other countries. In this competitive world, we need more technology to go ahead and become a successful person in the life

.

Some examples of the advancement in the technologies are establishment of railway system, metro system, railway reservation system, internet, super computers, mobiles, smart phones, online access of people in almost every area, etc. Government of India is creating more opportunity to the space organization and several academic institutions (Indian Association for the Advancement of Science) for the better technological growth and development in the country.

Today, countries are classified as developed and developing countries. The major categorization is based on economy and the application of science and technology. If carefully analysed, one gets to understand that countries which have a strong base in science and technology are the ones that developed faster. A few examples are of countries like Russia, Japan, Brazil, China, India and many more.

What improvement we are seeing in our life on daily basis is because of the science and technologies. For the proper growth and development of the country, it is very necessary to go science and technology hand in hand. Villages are getting developed to towns and towns to cities thus expanding the greater horizons of economy. Our country India is a fast developing country in the sense of science and technology.

## **PROGRESS IN SCIENCE AND TECHNOLOGY**

A country should adopt new technology, they should not stick to old technology. Advancement in the field of medical, agriculture, education, economy, sports, games, jobs, tourism, etc are the examples of science and technology. All such advancements show us that how both are equally beneficial for our life. We can see a clear difference in our life style while matching the ancient and modern way of life. High level of scientific and technological advancement in the field of medicine has made easy the treatment of various lethal diseases which was earlier not possible. It has helped a lot to the doctors to find effective ways to cure diseases through medicine or

operations as well as research vaccines to cure diseases such as cancer, AIDS, diabetes, Alzheimer's, Leukemia, etc.

## **CONCLUSION:**

Without proper implementation of science and technology, no nation could grow and all those nations that were labelled as low in growth have proved where they stand today and all that has happened only because of science and technology.

We as citizens of the nation and who hold equal responsibility for the growth should equip our youth with all possible facilities for their research thirst and support and motivate them, as the future of our nation is in their hands and they could get our nation to more advanced levels than what it is today.

I conclude my thoughts on science and progress in technology by saying that "if you use technology in positive manner you'll be benefited but if you use it in negative manner it will lead to distress, failure , So use technology in an intellectual manner"
